

## SCHOOL OF MINING

India is rich in mineral resources. Mining Engineering is an engineering discipline of Science and Technology in minerals and mines. This branch of engineering deals with many other disciplines, such as geology, mineral processing and metallurgy, geotechnical engineering and surveying. A mining engineer will plan and supervise mining operations. The exploration and operations to mine closure are main activities. The other related activities are feasibility study, mine design, development of plans. The environment and statutory requirements are also important

A mining engineer must therefore be concerned not only with the production and processing of mineral commodities, but also with the mitigation of damage to the environment both during and after mining as a result of the change in the mining area. CUTM course is designed with lot of practical sessions and field visits. There are high end laboratories to get an excellent learning outcome
