## News Letter

*Day 2: 25th July 2025*

*Talk by Dr. G.S.N Koteswar Rao on  
“Innovative Approaches in Drug  
Delivery*

*Dr. G. S. N. Koteswar Rao presented an enlightening talk on recent advancements and creative strategies in the field of pharmaceutical drug delivery. His session emphasized how cutting-edge technologies are transforming the way therapeutic agents are transported to specific sites in the human body, aiming to improve efficacy, reduce side effects, and enhance patient compliance.*

### **Key Highlights**

#### *Challenges in Conventional Drug Delivery*

*Limited bioavailability and rapid clearance of many active compounds.*

*Poor patient adherence due to frequent dosing.*

*Non-specific distribution leading to systemic toxicity.*

#### **Novel Delivery Systems**

*Nanoparticle Carriers: Liposomes, polymeric nanoparticles, and dendrimers designed for controlled release and targeted delivery.*

*Transdermal Patches and Microneedles: Painless, sustained drug release bypassing the gastrointestinal tract.*

## News Letter

*Talk by Dr. Indira Sudha on  
“Fingerprints in Medico-Legal and  
Clinical Practice*

*Dr. Indira Sudha presented an insightful session exploring the multifaceted role of fingerprints beyond traditional crime investigation. Her talk highlighted how dermatoglyphics—the scientific study of fingerprint patterns—has become an indispensable tool not only in forensic identification but also in various branches of clinical medicine.*

*Prof. C. Santhamma delivered an engaging talk highlighting the origins, principles, and contemporary relevance of Vedic Mathematics, an ancient Indian system of calculation derived from the Atharva Veda. She explained how this approach simplifies arithmetic and algebraic operations through a set of mental strategies known as sutras (aphorisms).*

## *News Letter*

*Day 3: 26th July 2025*

*Dr. D. Vidya Sagar on “Radiological Emergencies and Preparedness in Nuclear*

*Dr. D. Vidya Sagar, an experienced nuclear medicine specialist, presented an in-depth session on the challenges and best practices related to radiological emergencies in medical and research settings. His lecture emphasized that while nuclear medicine routinely uses small quantities of radioactive isotopes for diagnosis and therapy, accidents or mishandling can pose significant risks to patients, staff, and the environment.”*
